

# DuWett®

## SUPER-SPREADER

**LESS** water = **MORE** efficiency

Use 50L/ha  
Water instead  
of 200L/ha

**ARABLE SUPER SPREADER**  **DEPOSITION AGENT**

Du-Wett is a unique blend of organosilicone and organic fluids that provides superior coverage at reduced spray water rates per hectare. It provides at least 5 to 10 times the spread and coverage of standard non ionic adjuvants.

### WHEN ADDED TO THE SPRAY TANK, DU-WETT WILL DELIVER:

- Much better coverage of the crop, including hard to wet foliage and cereal ears, brassica and legume crops.
- Better deposition and retention of chemical on the plant = better results
- Better potential disease and pest control due to better coverage
- More hectares with one fill for significant time and cost savings
- Excellent Crop Safety and minimal impact on beneficial insects including Bees
- By adding Du-Wett to the spray tank, water rates can be very effectively reduced whilst increasing product performance e.g. 200-250 ltr down to 50Ltr/ha for cereal, grass and clover crops. For taller crops including certain mature Brassica's, Brassica seed crops and some legumes 100Ltr/ha may be required.

**IDEAL FOR:** Improved coverage of Fungicides, Insecticides, Contact Herbicides, Foliar Nutrients in much less water on a wide range of arable crops:

- All Low Volume Spraying including Aerial**
- Brassica Sprays**
- Cereal Ear Sprays**
- Pasture Spraying**
- Contact Herbicides**

**Benefits:**

- Less water per hectare
- Less spray time and cost
- Less fuel
- More Hectares Sprayed
- More coverage and deposition
- More performance
